## Lab Overview

1. Implement XNOR Gate with Neural Networks, using Keras Library
2. Create models with 2 hidden layers, 3 hidden layers, 4 hidden layers and change the number of units present in each layer. Also modify the number of Epochs in the code and evaluate the performance. Check how the performance varies and plot training loss
3. Use load\_iris\_dataset to load Iris Dataset for Neural Network and Split the dataset and train Neural Network
4. Change the hyperparameters of the network and evaluate the performance
5. Change the Activation Functions used and again write down the observations and try the same with different neural network, visualize the results and give interpretations for the same.

## Objectives

Implement XNOR gate with neural networks and create models with 2, 3 and 4 hidden layer.

Use load dataset and load Iris dataset for neural network and split the dataset and change the hyperparameter and activation function

## Problem Definition

Understand the OR and Implemented the XNOR gate and in part 2 implemented neural network for Iris dataset by changing the parameter and component values

## Approach

Imported the Dataset using Sklearn Library to notebook .Did some pre-processing technique and then build the model by changing the parameter and component values.

Part A. Implement XNOR Gate with Neural Networks, using Keras Library. The code for OR Gate is given herewith.

Part B. Create models with 2 hidden layers, 3 hidden layers, 4 hidden layers and change the number of units present in each layer. Also modify the number of Epochs in the code and evaluate the performance. Check how the performance varies (with respect to training time, accuracy etc).

Part C. Plot the training loss.

Part A. Use load\_iris\_dataset to load Iris Dataset for Neural Network

Part B. Split the dataset and train Neural Network

Part C. Change the hyperparameters of the network and evaluate the performance (as in the question I)

Part D. Change the Activation Functions used and again write down the observations

Part E. Try the same with different neural network, visualize the results and give interpretations for the same.

## Conclusion

In [ ]: In this lab, we have implemented XNOR gate **with** Neural Networks, using Keras Library. Then create models **with** 2 hidden layers, 3 hidden layers, 4 hidden layers **and** change the number of units present **in** each layer **and** also modified the number of epochs. **and** then we used a Iris dataset **and** did NN by changing Parameter value.
